

Press release

ITD presents the new carry 'n' hold catalogue for stationary carrier systems

ITD GmbH published the new edition of its catalogue for stationary equipment carriers punctually for Medica 2009. The catalogue is available in two languages and offers a comprehensive overview of the large range of stationary carriers marketed by the cart manufacturer from Bavaria.

Unterhaching, 9 November 2009 ITD GmbH, Europe's market leader in stationary and mobile carrier systems for medical equipment, has redesigned its catalogue for stationary equipment carriers. The catalogue is available in two languages – German and English. It presents more than 60 pages of detailed information and numerous diagrams and pictures showing the second product family of ITD GmbH used in medical settings – with particular emphasis on applications in operating theatres, accident and emergency departments and intensive care units.

Structure – straightforward and transparent

The design of the new catalogue for modul-port “stationary carrier systems” was based on the clear layout of the main catalogue for “Mobile Equipment Carts” which had already been established and in circulation for some time. The aim was to create a uniform profile offering detailed information about the modularity concepts and the extended, virtually invisible cable management system at the beginning of the catalogue alongside sample applications and information describing the benefits of the stationary carrier system.

The subsequent product section provides a comprehensive overview of the large selection of carrier arms available. It presents a comprehensive package of information with details of additional bench and wall mountings or specially designed solutions, such as those provided by carrier extrusions with mechanical or electrical height adjustment. This information is combined with full details of technical specifications and order numbers.

Easy download via the Internet

In addition to publication in classic hardcopy, the new catalogue for stationary support systems is also available as a complete version in electronic form in German and in English. These electronic versions can be accessed at the “Download Centre” of the new ITD website by going to www.itd-cart.com in a version that is continually updated to reflect the latest status. Anyone can download the electronic version.

Experience ITD products “live”

Two large showrooms at the location in Unterhaching near Munich and at the Head Office in Johanniskirchen near Pfarrkirchen, Lower Bavaria, also offer the opportunity to experience all ITD products at first hand throughout the year. Numerous national and international specialist exhibitions – attended by ITD itself, one of the company’s numerous national dealerships or international agents – also offer the opportunity of hands-on experience throughout the year. All contact data and the latest news and overview of all exhibition and event dates can currently be found on the Internet by clicking on www.itd-cart.com.
